## 1. My Person

---

### 1.1. David Poetzsch-Heffter

---

E-mail: davidpoetzsch [at] web [dot] de

I was born in 1991 in Germany. I started programming when I was 14. I tried many languages but today my two favourites are [Java](#) and [Ruby](#). I started working on Jim at the age of 16 and it is my first larger project and the first I really like to use myself.

## 2. Contact

---

If you have questions, criticism, new ideas for jim or anything else you want to tell me feel free to send me an e-mail (I speak English and German).

davidpoetzsch [at] web [dot] de

## 3. Acknowledgments

---

- There is one person who accompanied Jim's development process from its very beginning: **Uwe L. Korn**. *He advised me of some really interesting frameworks and tools such as Subversion for versioning (the source code you can browse is stored in a subversion repository), Derby which is now Jim's default database, Hibernate which is now used for the database handling and last but not least Apache Forrest, a framework I used to create this website.*  
On the other hand he *sponsored the server where this website is currently running.*
- While I'm no good at graphic design stuff I want to thank **Miriam Soffel** for *developing various concepts for the design of Jim's logo*, so I could choose one.
- Even if I wrote this image managing application I am not skilled in image manipulation. For this reason I am really thankful that **Stefan Templin** *actually painted and improved the concept of Jim's logo* for me (I only made some minor changes afterwards).
