

# Updating Jim

## Table of contents

1 How to update from version 2.1.0 to version 2.1.1.....	2
2 How to update from version 2.0.0 to version 2.1.0.....	2

## 1. How to update from version 2.1.0 to version 2.1.1

To update from version 2.1.0 to version 2.1.1 just download the normal Jim distribution from the [download site](#) and replace the old Jim installation folder with the new one.

### Note

To update to version 2.1.1 you must have Jim of version 2.1.0 installed! If you have an older version please update to version 2.1.0 first.

## 2. How to update from version 2.0.0 to version 2.1.0

- Download the [update.jar](#).
- Just run this file using  
`java -jar update_f2.0.0_t2.1.0.jar`  
Under windows a doubleclick should also work.
- Download a Jim distribution from the [download site](#).
- Now remove the Jim root directory of version 2.0.0 (the one you downloaded when you installed Jim 2.0.0) and replace it with the release you just downloaded (of course you have to extract it before, see [extracting and starting Jim](#)).
