1. What is JimSearch?

1.1. Description

JimSearch is a plugin that provides a simple search engine for Jim. With JimSearch you can search for images by defining tags an image must be tagged with (directly or indirectly if the image is tagged with a child tag of a given tag). JimSearch comes with an additional plugin named JimSearchGui that provides integration to Jim's standard interface [JimGui](#).

1.2. Features

- Simple but effective searches for images by defining a minimum amount of tags an image must have
- Integrates in Jim's standard user interface [JimGui](#)

1.3. License

JimSearch is - like Jim itself - licensed under the [Apache License 2.0](#) and therefore free software.

2. Download JimSearch

2.1. Binary downloads

- [JimSearch, version 2.0.1](#)
- [JimSearchGui, version 2.0.0](#)
- [older releases](#)

2.2. Browse the sources

- [JimSearch sources, current working copy](#)
- [JimSearch sources, all versions since version 2.0.0](#)
- [JimSearchGui sources, current working copy](#)
- [JimSearchGui sources, all versions since version 2.0.0](#)

3. The developer: David Poetzsch-Heffter

For further information on my person (I'm the one who also wrote Jim itself) see [Jim's](#)
